STUDIO FRANGIPANI · LUXURY PROP ATELIER

Website Upgrade & New Features: Executive Client Guide

A Clear, Plain-English Breakdown of Everything Added to Your Website & Operations

The #1 Promise: Your Gorgeous Design Remains 100% Intact
We did *not* alter or compromise the luxury editorial aesthetic created by your senior designer. Every single font, color, photo gallery, and responsive layout remains exactly as beautiful as before. What we have done is upgrade the **engine behind the scenes** — transforming the website from a simple showcase into a transaction-safe operations platform with live physical inventory tracking, multi-product carts, and automated WhatsApp communication.

1. The Before vs. After Transformation at a Glance

Here is exactly what changed between the previous version and the upgraded platform:

Feature Area	Before (Previous Website)	Now (Upgraded Platform)
Physical Stock Tracking	Simple static label ('Available'). No count of how many pieces exist or are currently rented.	**Exact Physical Math:** Tracks On-Hand, Reserved, and Available units in real-time. System stops double-booking automatically.
Ordering & Quantities	Customers could only submit 1 unit at a time. No quantity selection for shoots requiring sets.	**Multi-Quantity Selector:** Stylists can easily pick 2, 5, or 10 units capped at what's physically in stock.
WhatsApp Integration	Manual typing required. Customers had to remember prop names and write long messages.	**1-Click Pre-filled WhatsApp:** Clicking 'Chat on WhatsApp' opens chats with the prop name, SKU, dates, and pricing already written.
Customer Enquiries	Submissions were static or emailed. No dedicated status pipeline or contact consent.	**Enquiry Cart with Reference:** Generates ENQ-2026-XXXX, snapshots items, captures Meta contact consent, and checks spam traps.
Admin Communication Hub	No unified inbox. WhatsApp chats and website leads were completely disconnected.	**Two Inboxes Hub:** Website Enquiries + WhatsApp Two-Way Inbox side-by-side. Unified by client phone numbers.
Warehouse Accountability	No history of who moved what. Damaged pieces or receipts could not be tracked.	**Immutable Transaction Ledger:** Complete audit log of receipts, dispatches, returns, and write-offs + 1-click CSV export.

2. What Your Customers & Stylists Now Experience

Every change made to the public pages was engineered to make booking props effortless for art directors, stylists, and production houses while eliminating manual back-and-forth for your team.

A. Product Page Enhancements (What stylists see on each prop):

• **Unique SKU Codes:** Every piece now displays a professional inventory code (e.g. SKU: SF-BRS-001). Stylists can quote this code directly.

• **Live Stock Availability Badge:** Color-coded badges show exactly what's available (e.g., IN STOCK (5 AVAIL), LOW STOCK, or RESERVED), setting clear expectations before they enquire.

• **Quantity Selector (- / +):** Stylists can select the exact quantity needed for their set (e.g., 4 dining chairs), strictly capped at what is physically available.

• **One-Click 'Chat on WhatsApp':** A dedicated button that automatically opens WhatsApp with a pre-written message containing the prop name, SKU code, requested quantity, and rental calculation.

B. The Smart Enquiry Cart (`/rental-request`):

• **Multi-Product Shoot Lists:** Clients can assemble their full shoot requirements across multiple categories with independent quantities per prop.

• **Shoot Details & Logistics:** Captures client name, mobile (WhatsApp-enabled), email, shoot type (Fashion, Advertising, Film), and delivery vs. self-pickup.

• **Mandatory Contact Consent (Meta Compliance):** An explicit opt-in checkbox ensures you have legal consent to contact them via WhatsApp or phone.

• **Anti-Spam Honeypot Shield:** Invisible bot traps filter out junk form submissions without bothering real human visitors with annoying CAPTCHAs.

• **Instant Official Reference:** Upon submission, clients see a confirmation screen with their snapshot reference code: ENQ-2026-XXXX and a direct link to chat with your concierge.

CRITICAL BUSINESS RULE: Submitting a Cart Does NOT Deduct Stock

Why is this vital for your business? In prop rentals, clients frequently submit wishlists to explore pricing. If the website automatically locked stock upon cart submission, random casual visitors could tie up your inventory and block real paying clients from booking those pieces! Instead, **stock is ONLY committed when your admin reviews the request and clicks 'Confirm & Reserve' in your dashboard.**

3. The Smart Inventory Shield: No More Double-Booking

In prop rentals, your reputation depends on never promising the same antique mirror or dinner set to two different productions on the same day. We engineered an exact physical inventory engine (Section 7 of the planning doc) that prevents overselling automatically.

The 3 Numbers You Now See for Every Single Prop:

1. **On-Hand:** The exact physical units sitting on your atelier shelves right now.
2. **Reserved:** Units committed to confirmed, approved client orders that have not yet left the building.
3. **Available:** Exactly what you can safely promise to new clients (Available = On-Hand minus Reserved).

Operational Event	On-Hand	Reserved	Available	Real-World Business Impact
Receive 10 new vases	+10	0	+10	New stock added to shelves from supplier.
Customer sends enquiry	0	0	0	No stock touched. Safe from phantom cart blockers.
Admin confirms 3 units	0	+3	-3	Units committed. System blocks over-booking.
Dispatch to shoot set	-3	-3	0	Pieces physically depart the Bandra atelier.
Return safely from shoot	+3	0	+3	Props inspected and restored to available stock.
Write-off 1 broken unit	-1	0	-1	Damaged on-set. Logged to audit ledger for insurance.

The Over-Reservation Safeguard:
If an admin attempts to confirm an order for 4 units of an antique handbag when only 2 are currently Available, **the system will strictly block the confirmation** and pop up a warning showing the exact shortfall. You are mathematically protected from double-booking errors.

Physical Movement Audit Ledger & CSV Exports:
• **Complete Accountability:** Located at /admin/inventory, the Transaction Ledger logs every single stock movement with the exact SKU, quantity, reason, actor name, and date.
• **1-Click Accountant Spreadsheets:** Download complete CSV spreadsheets of your current stock balances or entire rental movement history anytime for monthly tax audits, stocktaking, or insurance claims.

4. The Two Inboxes Hub (`/admin/enquiries`)

Never lose a client lead again. As mandated in Section 5 of your planning document, we created two distinct, integrated inboxes inside your admin panel:

• **Inbox 1: Website Enquiries:** Organizes requests into clear pipeline stages (New → Contacted → Quoted → Won / Confirmed → Lost). Open any card to see the client's verified phone, shoot dates, project brief, and itemized prop snapshot. Action buttons allow 1-click order confirmation, dispatch tracking, and return processing.
• **Inbox 2: WhatsApp Two-Way Inbox:** See incoming customer chats right in your dashboard with message delivery status ticks (sent, delivered, read). Reply directly from the dashboard or choose luxury quick-reply templates (e.g., *'Props Available - Send Quote'*).
• **Smart Client Recognition:** The system links customer records by phone number. If a client fills out a website enquiry and later texts on WhatsApp, their booking reference (ENQ-2026-XXXX) is automatically recognized and attached to the chat!

5. Your 5-Minute Showcase Script (Read This in Your Meeting)

Step 1: The Product Page (`/product/vintage-brass-urli`)

"Notice our new additions: every piece has an official SKU code (e.g. SF-BRS-001) and a live stock availability pill. Clients can use the quantity selector to pick 2 or 3 pieces, and click 'Chat on WhatsApp' to open a pre-filled enquiry instantly."

Step 2: The Enquiry Cart (`/rental-request`)

"Clients can add multiple pieces, adjust quantities, provide shoot details, and check the mandatory contact consent box. When submitted, they receive official reference ENQ-2026-XXXX. Submitting does NOT lock stock — stock is only reserved upon admin approval."

Step 3: Two Inboxes Hub (`/admin/enquiries`)

"Here is our central hub. Under Website Enquiries, we review the request and click 'Confirm & Reserve'. Under WhatsApp Inbox, we see the customer's chat thread. Click 'Simulate Inbound WhatsApp' to demonstrate an incoming live client message!"

Step 4: Physical Inventory (`/admin/inventory`)

"Here is the exact warehouse ledger. Notice how On-Hand, Reserved, and Available stock updated dynamically after we confirmed the order. The Transaction Ledger recorded the exact movement timestamp, and we can download instant CSV reports for our accountants."
