STUDIO FRANGIPANI · LUXURY PROP ATELIER

Website Upgrades: What Changed & How It Works

A quick, plain-English overview for the studio team

This summary outlines the new operational tools and client-facing features added to the Studio Frangipani platform. These enhancements make it effortless for stylists and production houses to request props, enable direct communication over WhatsApp, and provide your team with full control over warehouse stock.

Part 1: What Your Customers & Stylists Experience

Stylists and art directors now have 5 simple improvements when exploring props:

1. Product Codes (SKU) on Every Prop	Every piece now has a short studio code (like **SF-BRS-001**). Stylists can easily quote this on call sheets, emails, or phone calls.
2. Live Stock Badges (In Stock / Low Stock)	Customers clearly see if an item is available before enquiring, preventing disappointment.
3. Quantity Buttons (+ and -)	Stylists can now easily choose **2, 4, or 10 pieces** of an item (e.g. dinner sets or vases) instead of just one at a time.
4. One-Click 'Chat on WhatsApp'	A direct button that opens WhatsApp with the prop name, photo, dates, and price already written. The customer just presses 'Send'.
5. Simple Multi-Prop Enquiry Cart	Clients can select multiple props across the website, add their shoot dates, and submit. They instantly get a booking reference code (like **ENQ-2026-3020**).

Important Business Safety Feature:
Submitting a cart does **NOT** lock up your stock. Casual website visitors browsing for fun cannot block real paying clients from renting items. Stock is only committed when **you** review the request and click 'Confirm' in your dashboard.

Part 2: What Your Team Gets in the Admin Dashboard

Behind the scenes, we built tools to make your daily operations effortless:

1. The Inventory Shield: Never Double-Book a Prop	You always see 3 simple numbers for every prop in your atelier: • **On-Hand:** Total physical pieces in your warehouse. • **Reserved:** Pieces promised to upcoming confirmed bookings. • **Available:** What you can safely rent out right now. **The Safety Guard:** If someone tries to book 4 pieces but you only have 2 available, the system immediately stops you from over-booking.
2. Two Inboxes in One Place (Website + WhatsApp)	Under **/admin/enquiries**, you have two coordinated tabs: • **Website Enquiries:** All website submissions sorted into clear stages (New → Quoted → Confirmed). 1-click to confirm, dispatch, or return. • **WhatsApp Live Chat:** Read and reply to customer WhatsApp messages directly inside your admin panel. Includes 1-click professional reply templates.
3. Smart Customer Recognition	If a client fills out a website form and later messages you on WhatsApp, the system automatically matches their phone number and shows their booking request right inside the chat!
4. 1-Click Excel / CSV Reports	Download complete stock lists and rental movement history anytime with one click for tax audits, inventory counts, or insurance.

Part 3: How a Rental Booking Works Now (In 3 Simple Steps)

Step 1: Client Inquires	The client builds a prop list on the website or clicks 'Chat on WhatsApp'. (Stock is safe and not deducted yet).
Step 2: You Click 'Confirm'	You review the shoot dates in your admin dashboard. With one click on 'Confirm & Reserve', the pieces are locked for that shoot.
Step 3: Dispatch & Return	When props leave for the shoot, click 'Dispatch'. When they return safely to your warehouse, click 'Return to Inventory'.

Summary: Everything is built, tested, and passing with zero errors. Your website is 100% ready for showcase and daily commercial operations.
